

Ultherapy® Fact Sheet

All you need to know about this Ultimate Beauty Breakthrough

What is Ultherapy®?

Non-invasive Lift using Ultrasound energy

Only delivered using the authentic Ulthera® system, **Ultherapy®** is a **non-surgical procedure** that uses **micro-focused ultrasound** to lift and tighten skin on the brow, under the chin, neck and chest. It stimulates the body's own natural healing process which jumpstarts the production of fresh, new collagen. The use of safe and time-tested ultrasound technology enables physicians to see and then treat the deepest support layers of the skin without cutting or disrupting the surface.

No downtime

The procedure normally takes around **60 – 90 minutes**, depending on the treatment area. Afterwards, patients can return to normal activities right away, without needing to take special measures. Results gradually appear over 2 to 3 months as new collagen works to lift and tighten skin. Further improvements can appear up to 6 months after the procedure as the collagen-building process continues.

US FDA - cleared

In 2009, **Ultherapy®** received its US FDA (Food and Drug Administration) clearance as the only non-invasive procedure to lift skin on the Brow, Neck and under the chin as well as to improve lines and wrinkles on the Décolleté.

A global success

To date, more than **1,200,000 treatments** have been performed worldwide with **4,200+ Ulthera® systems** in use globally. **Ultherapy®** is currently available in over 60 countries. In the Philippines, **Ultherapy®** is available at 42 accredited clinics. Visit <https://locator.ultherapy.com/philippines> for the full list.

Leading Aesthetics Company
